
EDUCATION

- **KTH, Royal Institute of Technology** Stockholm, Sweden
Master of Science in Computer Science Aug. 2019 – Present
- **KTH, Royal Institute of Technology** Stockholm, Sweden
Bachelor of Science in Information Technology Aug. 2016 – Jun. 2019

EXPERIENCE

- **Founder & Software Developer** Stockholm, Sweden
Nextline AB July 2019 – Present
 - **Software Development Consulting Company:** I founded Nextline AB to be able to work as a software development consulting while attending university. The experience of establishing and operating a company has been a great learning opportunity for me.
 - **Clients:** Nextline is since its founding hired by Fordonsbolaget AB until further notice.
- **Fullstack Developer** Stockholm, Sweden
Fordonsbolaget AB Jun. 2019 – Present
 - **Agile:** I am part of an international development team working in scrum to build a customer-facing web application and an internal tool used by purchasing and the workshop.
 - **Technologies:** The frontend of both applications is developed in Angular JavaScript, and the backend is implemented in Java with Spring Boot. SQL is used to query the databases, and the APIs are built according to the RESTful specification.
- **Laboratory Assistant in Computer Hardware Engineering** Stockholm, Sweden
KTH, Royal Institute of Technology Jan. 2018 – Mar. 2019
 - **Lab Examination:** During lab sessions of the course, I examined students on their solutions to the labs. The subject of the labs ranged from assembler and C to programming microprocessors.
 - **Lunch Office Hours:** Lunch office hours were held during lunch to give the students the option to ask for help with the subject. The ability to break down complex concepts and explaining them in a simple but accurate manner certainly improved my communication skills.
- **Store & Storage Employee** Stockholm, Sweden
Bygghax AB May 2016 – Jul. 2019
 - **Forklift:** I worked part-time at Bygghax during my B.Sc education on weekends and in the summers. The tasks ranged from attending the cash register to receiving and shipping deliveries with a forklift.

PROJECTS

- **B.Sc Thesis - Evaluation of Imitation Learning Algorithms:** We implemented and evaluated three different imitation learning algorithms in a simulated racing environment. Python and TensorFlow were used to implement the neural network for the algorithms.
- **Concurrent N-Body Simulation:** I implemented and compared two methods for calculating the interactive gravitational forces of the bodies in the system. I provided the lecturer with a visualization tool to use in future course iterations. The methods were implemented in C++ using the POSIX threads.
- **Database GUI for Caterbee AB:** As part of a project course, I was part of a team working in scrum to build an internal database GUI for handling orders, menus, and restaurants. The frontend was built with React JavaScript, and the backend used Python in combination with Microsoft Azure Cloud SQL databases.

PROGRAMMING SKILLS

- **Languages:** Python, C/C++, Java, JavaScript, Elixir, SQL
- **Technologies:** Git, TensorFlow, AngularJS, ReactJS, Jupyter Notebook, scikit-learn, Bash, POSIX Threads, Docker

SKILLS

- **Languages:** Native Swedish, Professional-Level English
